### 3.3 SWOT

#### *Strength*

- Potential for the Agriculture
- Potential for the Fishing
- High Density area in the Valikamam Region
- Nearly 40% of the land is Agriculture

#### *Opportunities*

- Connection with the neighboring towns

#### *Weakness*

- Lack of fishing related infrastructure facilities
- Lack of Infrastructure Facilities within the town centre
- Absent of proper solid waste management

#### *Threats*

- Growth of Neighboring town

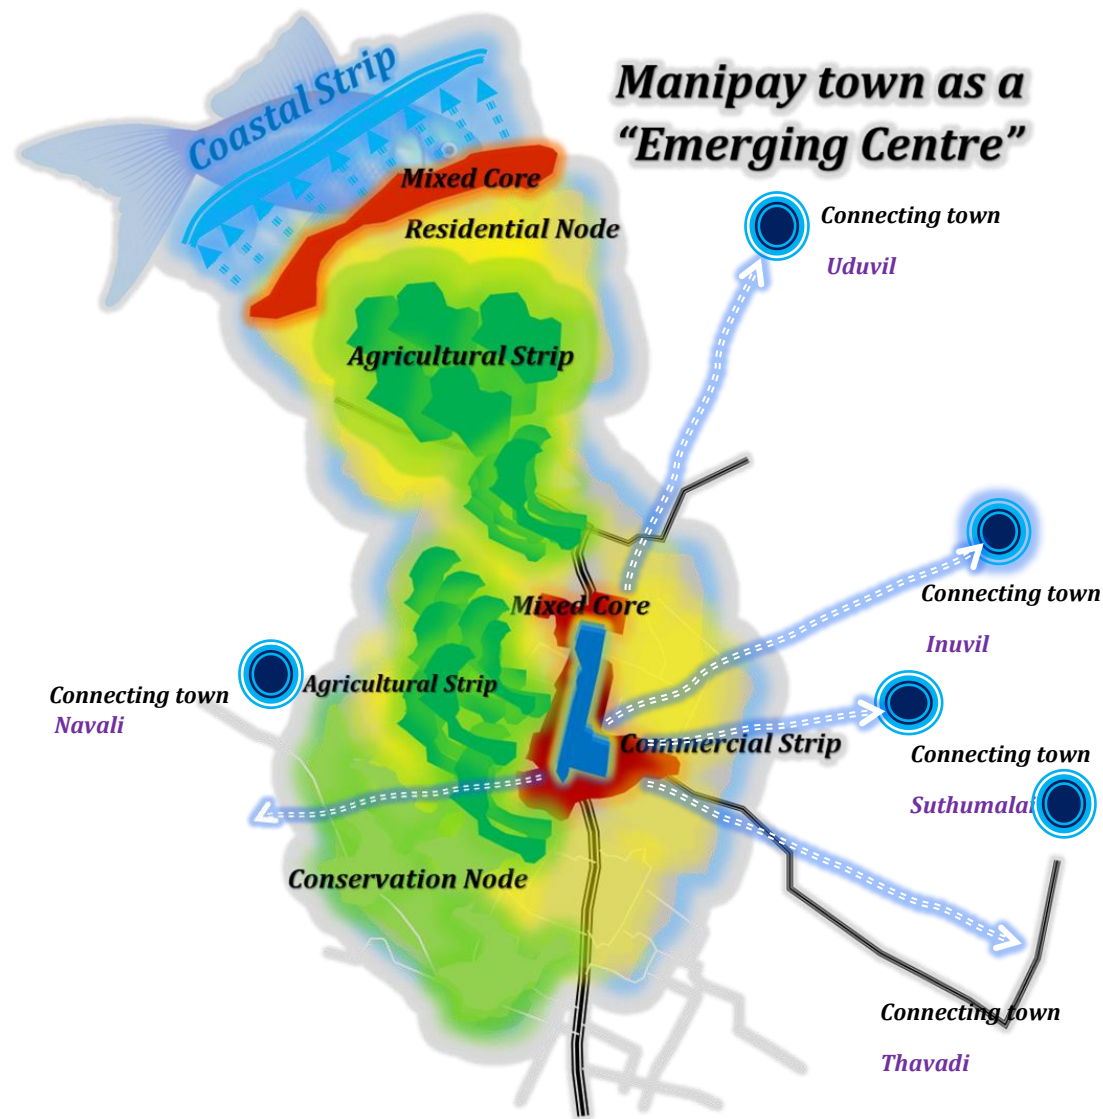

### **3.4 Concept Plan**

The town centre is the commercial centre which is traditionally associated with retail commercial.

According to that, for the town centre development, we have formulated the conceptual plan based on the existing function and characteristic also with the available potential of this area. Based on the concept plan, the centre part of the area is fully covering the commercial activities and next part of the surrounding area is fully covering the mixed development activities and apart from that, other areas are residential and agriculture area.

The concept plan is clearly explaining the Manipay town is directly connecting to the Uduvil, Inuvil, Suthumalai, Thavadi, Navalai areas. Also, those areas are function as a service catchment areas and it will be boost the functioning of the Manipay town. So, through this activity manipay town growing as an Emerging town.

Conceptual Framework

#### Coastal Strip

A zone directly adjacent to the waterline, where only coast related activities take place. Usually this is a strip of some 100 m wide. In this strip, coastal defense activities take place. In this strip often there may be restrictions to land use.

#### Residential Node

**Nodes** Nodes are points of dense. land use connected to each other and to surrounding residential neighbourhoods by important community corridors. Nodes are complete communities, each including residential, business/ commercial, recreation, and ecological land uses.

#### Commercial Strip

A linear pattern of retail businesses along a major roadway, characterized by box-like buildings with prominent parking lots visible from the roadway, multiple driveways, large signs, and a dependency on automobiles for access and circulation.

#### Agriculture Strip

Strip cropping involves planting crops in strips across the slope, with alternate strips of grain and/or forage crops. Strip cropping combines the soil and moisture conserving properties of cross-slope farming with the soil building advantages of a crop rotation and is more effective in reducing soil losses.

#### Mixed Core

Mixed use is a type of urban development, urban design, urban planning and/or a zoning classification that blends multiple uses, such as residential, commercial, cultural, institutional, or entertainment, into one space, where those functions are to some degree physically and functionally integrated

#### Conservation Node

Conservation is the careful maintenance and upkeep of a natural resource to prevent it from disappearing. A natural resource is the physical supply of something that exists in nature, such as soil, water, air, plants, animals, and energy.

### ➤ Location for Development of Fish Market at Kaakkaithivu

A fish market is a marketplace for selling fish and fish products. It can be dedicated to wholesale trade between fishermen and fish merchants, or to the sale of seafood to individual consumers, or to both. Retail fish markets, a type of wet market, often sell street food as well. According to that, the proposed Fish market development is including following items.

- Technology: The latest technology and amenities can be incorporated into new fish markets.
- Sustainability: There is a growing emphasis on sustainable and responsible harvesting of aquarium fish.
- Infrastructure: Modernization of infrastructure can be provided at existing facilities.
- Economics: The economics of scale in fish production, storage, transport, and distribution should be considered.
- Hygiene: Small-scale fish landing and marketing facilities should maintain good standards of hygiene.
- Spare parts: Continuity in the supply of spare parts should be ensured.
- Skills: Availability of essential skills to operate and maintain the equipment should be ensured.

### ➤ Mathakal- Beach Development

A beach is defined as a narrow strip of land that borders a body of water such as an ocean or lake. Beaches are composed of a mixture of sand and pebbles that are deposited by waves from the ocean. Based on that, in order to enhance the tourism activities, the beach development at Mathagal has been proposed. The beach development consists following activities;

1. Small Hut
2. Tree Planting
3. Food Stole
4. Playing Area
5. Lighting

➤ **Extended development works for solid waste Management center at Kallundai**

The Existing solid waste management centre is functioning at Kallundai. Even though, based on the problem analysis, found the lack of facilities to manage the solid waste at this site. In this circumstance, proposed the rebuffer to this area in order to full fill the problem of this area and decided to extended the activities to this area.

**Proposed Activities**

## 4.2 Town center development project

The town centre development project has been selected through the identified problems and potential to cater the gap of the existing issues withing the Manipay town areas. Based on that, we have proposed some projects within the town centre.

### Identified Projects for the town centre development

### ❖ Proposed the library building

The libraries play an essential role in local communities by providing access to information and resources, supporting literacy and education, promoting lifelong learning, and serving as a community gathering space. So, based on the important, proposed the library building including the reading area, seating area and the Sanitary facilities. Because the Manipay town area does not have a proper library facility.

### ❖ Proposed Play Ground

The Playgrounds provide a variety of benefits. Because it will help to kids to develop physical strength, coordination, and balance also improve their mental health and child's brain, foster social skills,

communication, and creativity, and provide a safe place for them to explore and learn. On the basis, proposed the playground development with the small scale of stadium to promote the recreational activities for the PS area.

### ❖ Proposed Commercial Building

The Commercial buildings provide spaces for businesses to operate, contributing to economic growth. Furthermore, they create opportunities for employment, generate revenue through rent or sales, and stimulate economic activity in the surrounding areas. Because, the Manipay town is functioning as a emerging centre. According to that, proposed the commercial building consist with shops and parking spaces to boost the commercial activities within the PS area.

#### **Expected Situation**

#### **Expected Situation**

### ❖ Roundabout development

The Roundabouts are a safer alternative to traffic signals and stop signs. The tight circle of a roundabout forces drivers to slow down, and the most severe types of intersection, crashes, right-angle, left-turn and head on collisions are not likely. So, Roundabouts improve traffic flow and are better for the environment. According to that, manipay town is directly connecting to the other towns through the service catchment.

In this perception, need to follow the proper traffic movement within the manipay town area. So, based on that, proposed the roundabout with the walkway improvement and greenery to improve the mobility enrichment. Other than that, proposed three numbers of circular road development to enhance the connectivity within the town centre area.

## **Part II**

## **Chapter 05 – Development Zones and Zoning Guidelines**

### **5.1 Introduction**

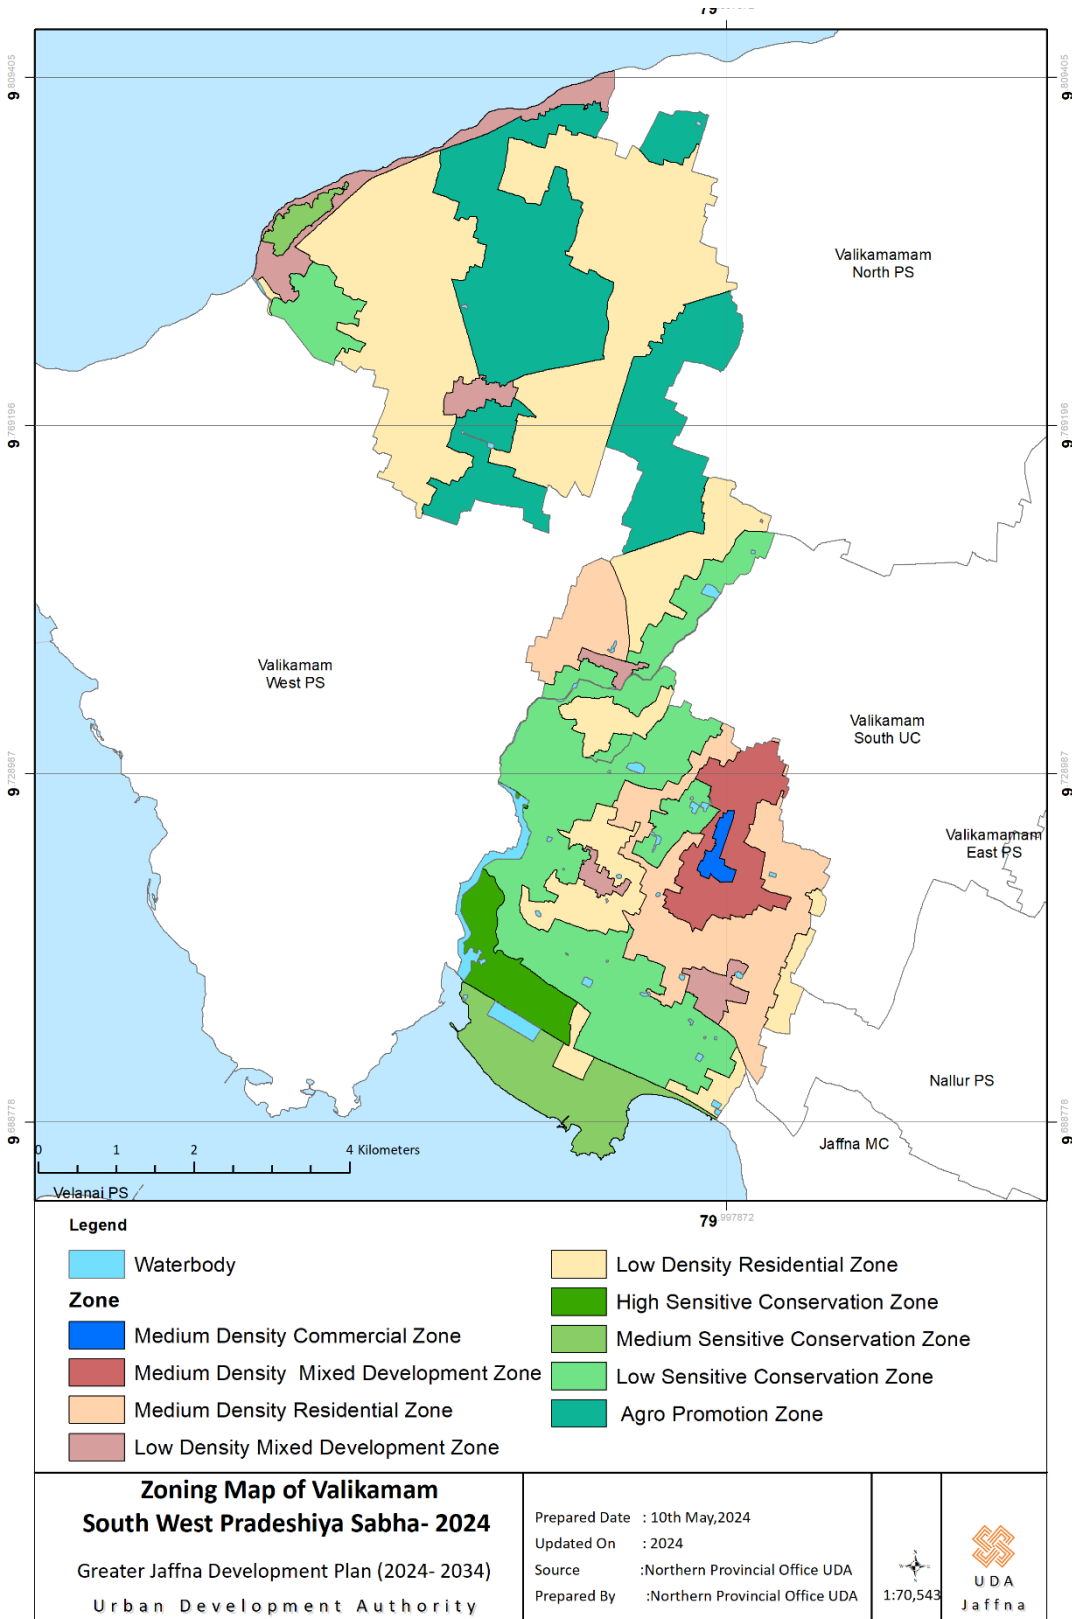

The Zoning is legislative method of controlling land use by regulating such considerations as the type of buildings (e.g., commercial or residential) that may be erected and the population density and also one of the strategic planning controlling tool for regulating the development activities and environment characteristics to enrich the functioning of the area.

Accordingly, the Valikamam South West PS area plan have identified five strategical zones. This Zone factor-based Zoning plan will give high importance for the lands with economically high value and will enhance the optimum utilization of the available developable lands and also parallelly to protect the environmental sensitivity lands to enhance the environmental value of the area.

For deriving the zoning boundaries for each zones initially existing character and functioning of the planning area, expected future character for the identified area and available potentially for the development of the area were given higher prioritization. Here, the developable scope of each identified zones has been finalized based on the available developable floor area which is compared with the future development trend of the particular zone and the space needed to cater the future development catchment capacity of the zones.

## 5.2 Development Zones

Map 6: Zoning Plan for Valikamam South West PS (2024-2034)

### 5.3 Zoning Factor

By the local area development plan for Valikamam South West PS the jurisdiction is divided into five main development zones and those main development zones are further divided into sub-zones based on the expected development density. Accordingly, the zone factor was determined based on the expected development density and the amount of developable land for that development zone.

Main Zone	Sub Zone	Zone Factor	Plot Coverage(%)
<b>Commercial</b>	Medium Density Commercial Zone	2.14	Commercial 80% Others 65%
<b>Mixed</b>	Medium Density Mixed Development Zone	1.92	Commercial 80% Residential 65%
	Low Density Mixed Development Zone	1.37	65%
<b>Residential</b>	Medium Density Residential Zone	1.32	65%
	Low Density Residential Zone	0.78	65%
<b>Agro Promotion</b>	Agro Promotion Zone	0.95	50%
<b>Conservation</b>	High Sensitive Conservation Zone	0	≤ 05%
	Medium Sensitive Conservation Zone	0	≤ 05%
	Low Sensitive Conservation Zone	0.56	50%

## 5.4 Common Guidelines for Planning Area

- i. These Regulations and guidelines apply to the entire area within the administrative limits of the Valikamam South West PS area which has been declared as an Urban Development Area in the Extraordinary Gazette Notification No. 2185/74 of 24.07.2020 under Section 3(i) of the Urban Development Authority Act No. 41 of 1978.
- ii. In addition to the provisions of this zoning plan, the Planning and Development guidelines applicable to any development work is regulated by the Planning and Building Regulations/Orders (General) published in the Gazette Notification No. 2235/54 dated 08th July 2021 by the Urban Development Authority.
- iii. For areas declared as urban areas prior to 24.07.2020, the lots sub-divided before 24.07.2020 are considered as existing lots
- iv. If the owner of a certain land gifts the portion of land, falling within the street line/proposed road width without compensation for the road, the entire plot will be considered for the allowable Floor Area Ratio for the proposed development. But while calculating the plot coverage percentage, the rest of the plot, excluding the portion belonging to the street line/proposed road width should be considered.
- v. In cases where the development premises face more than one road having right of way with a minimum width of 6 m or more than that and connected to main roads independently, the sum of the widths of all those roads may be considered as the access road width to calculate the permissible development on a case-by-case basis
- vi. In cases of bank cutting for construction work on a sloped land, the recommendations of the relevant institutions should be obtained and a space of at least 1 meter should be allocated from the upper edge of the cutting plane to the border of the adjacent fence.
- vii. In cases where any land belongs to two or more zones, the designated zone of the land is determined as the zone which provides the main access to the respective lot.
- viii. When such plot of land, is accessed by two or more roads of the same width the zone in which higher portion of land is fallen shall be considered as the designated zone. (This regulation is not applicable for conservation zones.)

- ix. If a land portion falls between two Local Authority areas, the Authority shall determine the use of that land on the agreement of the relevant Local Authorities for the use of the zone which gets the main access.
- x. If the plot is accessed by two or more roads of the same width, the zone of the larger extent of the plot shall be applied.
- xi. When a zone is demarcated as the first block facing an access road as the zone boundary, the entire plot shall include in that zone. When the plots in the back is somehow amalgamated with the first plot and approved as a single plot of land, the last boundary of that total land shall be considered as the zonal boundary. (This regulation is not applicable for conservation zones.)
- xii. If a boundary change occurs between the physical boundary and Geographical Coordinates shown in the zoning plan, the final decision in this regard rests with the Planning Committee of the Urban Development Authority.
- xiii. The Authority has the power to decide on granting approval for uses similar to the permitted uses in the zone, although not specified in the category of permitted uses in the zoning plan.
- xiv. Existing uses which are not permissible within particular zone can be considered only for continuing under prevailing status. Approval for any extension of those existing uses shall be considered within the same lot.
- xv. Construction of boundary walls along the Street Line may be considered for approval subject to the signing of non-compensation agreement with the agency to which the road belongs.
- xvi. Various religious statues, religious symbols, signs or similar constructions are not allowed in the intersection, both sides of roads, building lines, road widening limits and reservations, and no compensation will be paid for the removal of such constructions.

- xvii. If any land is earmarked for a cemetery/crematorium, recommendations should be obtained from the relevant local authority.
- xviii. If the tower cranes are being used for any development, an approval with the recommendation of qualified engineer and insurance cover shall be obtained from institution where relevant development approval was granted.
- xix. 50% of the land should be kept open as open space when constructing buildings for schools and children's homes.
- xx. If it is not possible to provide parking space within the development site itself, then a site at a maximum distance of 500 meters can be used for the purpose subject to a Preliminary Planning Clearance.
- xxi. In this planning area, for the lands or reservations belongs to the government institutions, departments or corporations such as Department of Archeology, Department of Forest Conservation, Irrigation Department, Coastal Conservation Department, Agrarian Services Development Department, Land Development Corporation, Geological Survey and Mines Bureau, etc. recommendations and development proposals from the relevant institutions should be obtained approval before carrying out the development work.
- xxii. All excavation work should be done according to the recommendations of the relevant institutions including the Geological Survey and Mines Bureau, and after the completion of the work, the excavated places should be restored or appropriate measures should be taken according to the recommendation of the said institution.
- xxiii. In case a problem arises in relation to any statutory planning, development or building regulation or its interpretation or practical application, the Main Planning Committee of the Urban Development Authority has the final decision in the matter.
- xxiv. If a regulation related to the land is relaxed or removed for any reason during the granting of development approval and the amount of land belonging to that regulation is numerically calculated, the related value is assessed and an amount not exceeding 30% of that value should be charged to the authority.

- xxv. If the proposed development area located adjacent to the edge of the zoning boundaries will get the benefits of prominent zone. (This regulation is not applicable for conservation zones.)
- xxvi. If boundary wall construction proposed as center foundation, consent to be obtained from owner of the adjacent land and which should be certified by particular Grama Niladhari.
- xxvii. Location of water source should be located at least 18m away from waste water disposal site, Septic Tanks & Soakage pits.
- xxviii. If the distance between water source & pit is below 18m, design and certification for the sealed pit should be obtained from the Qualified Engineer.

## 5.6 Zoning Guidelines

The zoning guidelines in effect of five main Development Zones in the Local Area Development Plan for Valikamam South West PS area are given below.

Natural Aesthetics: Design development that blend with the natural surroundings. Use earthy and muted color schemes that harmonize with the forest environment.</li> <li>6. Rustic Design: Incorporate rustic architectural elements, such as exposed timber beams, stone accents, or thatched roofs, to create a natural and cozy atmosphere.</li> </ol>

	<p>7. Sustainability Features: Include green building features like rainwater harvesting, solar panels for lighting, and low-flow water fixtures to minimize environmental impact.</p> <p>8. Off-Grid Amenities: Provide off-grid amenities such as composting toilets, and limit the use of electricity to maintain a sustainable and eco-friendly experience.</p> <p>9. Natural Ventilation: Design the development with proper ventilation to minimize the need for air conditioning, allowing guests to enjoy the fresh forest air.</p> <p>10. Privacy and Scenic Views: Ensure that each Development offers privacy and scenic views of the forest. Incorporate large windows or open-air elements to connect guests with nature.</p> <p>11. Minimal Site Disturbance: Construct each development with minimal disruption to the natural terrain. Avoid cutting down trees or disturbing sensitive areas.</p> <p>12. Outdoor Spaces: Include private outdoor spaces like decks, patios, or balconies where guests can relax and enjoy the forest.</p> <p>13. Fire Safety: Implement fire-resistant building practices and provide safety equipment to mitigate the risk of forest fires.</p> <p>14. Accessibility: Design development to be accessible to people with disabilities, including wheelchair ramps and wider doorways.</p> <p>15. Multi-Season Use: Insulate cabanas for year-round use, and include heating options for colder seasons.</p>

	<p>16. Waste Management: Establish a responsible waste management system for guests and staff to minimize the environmental impact.</p> <p>17. Local Workforce: Employ local labor and support local communities for construction and maintenance to benefit the local economy.</p> <p>18. Educational Signage: Install signage or materials in cabanas that educate guests about the forest ecosystem and encourage eco-friendly behavior.</p> <p>19. Wildlife-Friendly: Design features that minimize disturbance to wildlife, such as bird-friendly window treatments or designated wildlife viewing areas.</p> <p>20. Light Pollution Control: Use lighting fixtures that minimize light pollution and allow guests to enjoy stargazing.</p> <p>21. Signs and billboards should, where possible, incorporate colors and materials that are compatible with the existing character of an environmentally sensitive area.</p> <p>22. It is preferable that billboards and freestanding signs in sensitive environmental areas are used for interpretive, public safety or educational purposes.</p> <p>23. Dune Stabilization Planting native dune vegetation to stabilize sand dunes and prevent erosion, as well as providing habitat for wildlife. Promoting ecotourism, nature based coastal development.</p>
